

Aluminum ALSI 10 MG

TECHNOLOGY: **DMLS**

APPLICATIONS: Aerospace & Automotive / Complex Geometries / Thin Walls

DESCRIPTION:

AlSi10Mg is a typical casting alloy with good casting properties and is typically used for cast parts with thin walls and complex geometry. It offers good strength, hardness and dynamic properties and is therefore also used for parts subject to high loads. They can be machined, spark-eroded, welded, micro shot-peened, polished and coated if required. Conventionally cast components in this type of aluminium alloy are often heat treated to improve the mechanical properties, for example using the T6 cycle of solution annealing, quenching and age hardening.

Parts in Aluminium AlSi10Mg are ideal for applications which require a combination of good thermal properties and low weight. Typically used in aerospace and automotive industries for low cost prototyping, complex geometries or thin walls.
